Amendments to the Claims:

This listing of claims will replace all prior versions and listings of claims in the application:

Listing of Claims:

Claim 1 (currently amended): A system for posting records in customs, the system comprising a plurality of client computers, an enterprise server, a database and a customs server, wherein:

the client computers provide interfaces for users to maintain information on an enterprise, contracts, materials and customs;

the enterprise server receives and handles input information, generates a plurality of records for posting in customs, and transmits the records to the customs server, the enterprise server comprising:

an information maintaining module for adding, modifying, inquiring and deleting the information on the enterprise, the contracts, the materials and customs;

a records posting module for generating the records for posting in customs according to the information on the enterprise, the contracts and the materials, for transmitting the records to the customs server, and for storing the records in a database, the records posting module comprising:

an enterprise records posting sub-module for generating enterprise records according to the information on the enterprise;

a contract records posting sub-module for generating contract records according to information on respective contracts; and

a material records posting sub-module for generating material records according to information on respective materials; and

10/823,246

a customs data synchronizing module for synchronizing customs information stored in the database based on the content of feedback on the records received from the customs server, and for updating the corresponding records accordingly;

the database stores configured information on the enterprise, the contracts, the materials and customs, generated the records, and the customs server feedback on the records; and

the customs server receives the records transmitted by the enterprise server, and transmits the feedback on the records to the enterprise server.

Claim 2 (original): The system as described in claim 1, wherein the enterprise server further comprises a system configuring module for initializing the system.

Claim 3 (original): The system as described in claim 1, wherein the enterprise server further comprises an information enquiring module for enquiring of statuses of the records.

Claim 4 (canceled)

Claim 5 (original): The system as described in claim 3, wherein the statuses of the records comprise unrecorded records, recorded records, and the records which have been fed back by the customs server.

Claim 6 (currently amended): A computer-enabled method for posting records in customs, the method comprising the following steps:

providing a system plurality of client computers for monitoring and maintaining information on an enterprise, contracts, materials and customs;

providing an information maintaining module in an enterprise server for enquiring of a status of information on the enterprise, contracts and materials, and determining whether corresponding records for posting in customs have been generated;

10/823,246

providing an enterprise records posting module in the enterprise server for generating any ~~corresponding~~ enterprise records that have not been generated according to the information on the enterprise, the enterprise records forming part of the corresponding records;

providing a contract records posting module in the enterprise server for generating contract records according to information on respective contracts, the contract records forming part of the corresponding records;

providing a material records posting module in the enterprise server for generating material records according to information on respective materials, the material records forming part of the corresponding records;

the enterprise server transmitting the corresponding records to [[the]] a customs server, and storing the corresponding records in [[the]] a database;
and

the enterprise server receiving and storing feedback on the corresponding records from the customs server, determining whether the corresponding records need to be modified as a result of according to the feedback, and synchronizing customs information in the database according to the feedback and modifying the corresponding records accordingly if modification is needed.

Claim 7 (currently amended): The method as described in claim 6, further comprising the step of updating the ~~statuses~~ status of the records information on the enterprise, the contracts and the materials.

Claim 8 (currently amended): The method as described in claim 6, wherein the feedback on the corresponding records from the customs server comprises one or more notices of error in the content and/or format of a record, and/or one or more ~~noties~~ notices of acceptance of a record.

10/823,246

Claim 9 (new): A system for posting records in customs, the system comprising a plurality of client computers, an enterprise server, a database, and a customs server, wherein:

the client computers provide interfaces for users to maintain information on an enterprise, contracts, materials and customs;

the enterprise server receives and handles input information, generates a plurality of records for posting in customs, and transmits corresponding records to the customs server, the enterprise server comprising:

a records posting module, comprising:

an enterprise records posting sub-module for generating enterprise records according to information on the enterprise;

a contract records posting sub-module for generating contract records according to information on respective contracts; and

a material records posting sub-module for generating material records according to information on respective materials;

the database stores configured information on the enterprise, contracts, materials and customs, the corresponding records, and customs feedback in response to the corresponding records; and

the customs server receives the corresponding records transmitted by the enterprise server, and transmits the feedback in response to the corresponding records to the enterprise server.

Claim 10 (new): The system as described in claim 9, wherein the enterprise server further comprises a system configuring module for initializing the system.

Claim 11 (new): The system as described in claim 9, wherein the enterprise server further comprises an information enquiring module for enquiring of status of the corresponding records.

10/823,246

Claim 12 (new): The system as described in claim 9, wherein the enterprise server further comprises an information maintaining module for adding, modifying, inquiring and deleting the information on the enterprise, the contracts, the materials and customs.

Claim 13 (new): The system as described in claim 9, wherein the enterprise server further comprises a customs data synchronizing module for synchronizing customs information stored in the database based on the content of the feedback from the customs server, and for updating the corresponding records accordingly.
